

James W Lane, MD

Primary Care - Family Medicine

Dr. Lane's interests include venous stasis ulcers, arterial wounds, pressure injuries, diabetic foot ulcers, non-healing surgical wounds, burns, and many other difficult to heal open sores. He also specializes in hyperbaric medicine, which uses oxygen to treat chronic wounds and radiation injuries.

After graduating from Hahnemann University, Dr. Lane completed his family medicine residency at St. Vincent Health Center. He owned and operated his family practice office for three years before joining the Saint Vincent Primary Care service line, for another seven years. Seeking something new, Dr. Lane then moved to St. Vincent Fast Track and Urgent Care, treating patients for two decades. He worked in occupational medicine for one year, before joining the team at the AHN St. Vincent Wound Care Centers.

When he is not treating patients in the wound center, Dr. Lane enjoys antiquing, home restoration projects and making maple syrup.
